

ENZACTA TESTIMONIES AND INFORMATION

"I had MS (multiple sclerosis) diagnosed in 1996. Three months ago I was invited to an informational Enzacta meeting and I went in my wheel chair. I started PXP and approx 4 weeks later I WALKED into the Enzacta meeting! I've been on PXP about 3 months now. I can now walk without my wheelchair, I still use a cane to help steady me. Another thing is that my digestive system works much better and I really notice the difference in my stools. Because of my MS I used to sleep all day long. Now I am awake all day and even weaning off some medications with my doctor's approval! People that have MS cannot be in the heat and humidity for very long and now for the first time in a long time I can stand much more heat and humidity. I spend a lot of time outdoors now. I suffered from erectile dysfunction and even that is much better. I am married and for over two years and have not gotten aroused. I sleep in bed with my wife and there has been no stiffness down there. After about two months on PXP I have been aroused periodically. This is a big surprise to me! I am so excited to have the opportunity to use PXP, it has literally changed my life and would recommend it to anyone especially those with MS."

Another congrats to Alfa PXP!

He told me that his wife has cancer. He doesn't usually go for cure-alls, but his sister-in-law had breast cancer and decided to go with PXP before the conventional route. PXP shrunk the tumor so small that she needs no other treatment!

Needless to say, he was already sold on the product, he just wanted to know how fast I could get it to him! I said, as fast as you can get me the funds!

And I told him I would be praying for his wife.

PXP is truly for everyone!

My name is Kathy Glasch and I am from the Chicago area. About 8 months ago my husband Mickey and I started taking PXP an Enzacta Product. I am happy to report the following great things that have occurred in our physical health as a direct result from taking PXP twice a day.

One of the first things that I noticed is that the tremendous pain I had from arthritis was literally diminished. I was taking 21 Advil a day to quell the pain. I noticed after about 7 days the pain became noticeably lessened. After about two weeks the pain was completely gone and I no longer take ANY pain meds. My energy level dramatically increased and I began to sleep very, very soundly at night. Prior to taking PXP I struggled with insomnia. I started to notice that when I woke up in the morning I awakened with energy and ready to tackle a hectic day. It is important to know that I hadn't felt well for quite some time prior to taking PXP. I had bouts of depression and I am very happy to report that I no longer

suffer from these bouts.

Another benefit I experienced with PXP was my blood pressure is now 120/80 when it used to be 160/95. My cholesterol is 173 and my triglycerides are 75. My skin is now very clear and much softer. The whites of my eyes are now also very clear and my nails are very strong and I find myself constantly filing them because they grow so fast.

I cannot even begin to tell you how great this product is and how it has impacted the quality of our lives. I would “never” want to be without Enzacta’s PXP!!

DIABETES

Diabetes is one chronic disease that affects 3.36 million Filipinos, according to the Department of Health. It is the country’s leading cause of adult blindness, kidney failure and non-traumatic limb loss.

Lito Patricio, 52 years old, knows first-hand how diabetes can lead to all kinds of troubles. At 29, he was diagnosed with type 2 diabetes. He took his medications religiously. At 45, he needed laser surgery on both eyes as blood vessels in his retina erupted. Two years later, he needed to have an operation again. But this time, the pressure on his eyes was too great.

“The doctor told me my kidneys were damaged and I needed a transplant immediately,” says Lito. A transplant would cost from P 500,000.00 to P 1 million pesos. Either that or he had to be prepared for a lifetime of dialysis.

Lito remembered that his mother had died after her second dialysis. He was paralyzed with fear. He couldn’t afford a transplant and was afraid of dialysis. He told nobody about it and hoped it would just go away.

On June 6, 2002, he was rushed to St. Luke’s hospital for emergency dialysis. He said he was so sick that he didn’t know where he was.

NEAR DEATH EXPERIENCE

On his second dialysis, Lito had a strange experience. “I saw my wife on one side of the bed and my son on the other,” said Lito. “Then, I saw my body on the bed, very still. I then realized I was moving up – very fast... I then saw a very bright blinding light. I knew it was God,” Lito narrated. He said he then prayed, “Lord forgive me for all my sins. If you want to take me now, I am going with you, but I am not yet finished here on Earth. My sons are still studying. And how about my employees?”

Lito swore that he then heard a very loud voice telling him: “Forget your past! Have a happy life! Do good to others!” And then he woke up.

According to Lito and his wife Josephine, the doctors were surprised that he woke up so soon. He had only 30% oxygen in his body and was supposed to be in coma.

Afterwards, Lito's life revolved around dialysis three times a week. "I stopped dreaming. All I could do was count the days to the next dialysis," said Lito.

Lito Patricio had been undergoing dialysis 3 times a week for four years. His doctor reduced his treatments to twice a week after he started taking PXP. One year later, it was down to once a week. "PXP is a gift from Heaven! My sight became clearer, my strength came back, the pains are gone, and I regained my sex life!" says Lito.

Mely Revilla is 48 years old, a housewife with three children. She says she is often highly stressed. When she was in her 30s, she was already hypertensive. At 38 years old, she suffered a mild stroke. By November 2004, she felt very weak. "My body was bloated. The doctor said that my kidneys were damaged," she recalls. By January 2005, she blacked out and was rushed to the Polymedic for chronic kidney failure. She was then transferred to the National Kidney Institute. There, she got infection due to the catheter twice. She was given blood transfusion.

Weak and bed-ridden, she had to undergo dialysis treatment twice a week. She even had to be spoon-fed.

MIRACLE FOOD

Mely was introduced by a friend to a food supplement called Alfa PXP Plus or alpha polysaccharide peptide. Almost immediately, she felt her strength coming back. "After ten days of taking PXP, lab results showed that my kidneys were 70% normal!" she says.

After one month, she cut her dialysis treatment to once a week. After 2 months, she needed dialysis only once a month. After 10 months of using PXP, she stopped dialysis treatments altogether.

"Unfortunately, after 2 years of no dialysis, I had to undergo dialysis again last month because of stress and UTI (urinary tract infection)," Mely reveals. But she is confident that the dialysis is only temporary.

Mely was the first dialysis patient to take PXP. Fellow dialysis patients found hope.

Another diabetic and dialysis patient is 59 year-old Hermie Concepcion. He began dialysis treatments – three times a week – in May 2005. In September 2005, he started taking PXP. After 3 months, he was down to two dialysis treatments a week. Since December 2006, he has been going for dialysis only once a week.

“He used to take 12 kinds of medication for his various illnesses like hypertension and carotid stenosis (obstructed carotid artery). Now, he takes only PXP and the medicine for hypertension,” Hermie’s wife, Lota, says proudly.

POLYSACCHARIDE PEPTIDES (PXP)

Peptides are formed from the linking of amino acids. Amino acids are the building blocks of proteins. Polysaccharides are essentially carbon sugars or complex carbohydrates which are used as sources of energy by the cells.

PXPs are found in mushrooms and in cereals like barley, oats and rice. PXPs are called either alpha or beta-glucans, depending on their structural arrangements. Beta PXPs are usually found in mushrooms while Alpha PXPs are usually found in rice.

Vicrod Brozas, COO of ENZACTA Philippines, distributor of Alfa PXP Plus, now Alfa PXP Plus.

Functional foods or nutraceuticals are foods or from foods that have supposed physiological benefits like protecting the body from chronic diseases.

According to Enzacta’s literature, “Alpha Polysaccharide-X-Peptides (is) a functional nutrient which is a combination of complex carbohydrates and vital proteins having essential and non-essential amino acids plus the most important vitamins and minerals and antioxidants in dry powdered form.”

Russell Hall, CEO of ENZACTA, which has its headquarters in Mexico City and branches in Spain, the Philippines and U.S.A., was in Manila in November 2006 for the launching of Alfa PXP Plus (an improved version of Alfa PXP plus) at the Shangri-La Hotel in Makati. He explained then the complex process of producing PXP. Various seeds were selected by specialists in nutrition, biotechnology and genetics from thousands of rice varieties – brown rice, short-grain rice, fragrant rice, etc. These were then planted in highly alkaline and toxin-free soil rich in Spirulina. The farms are located in Siam valley in Thailand which, according to ENZACTA, is “the biggest natural organic plantation treasure in the world”.

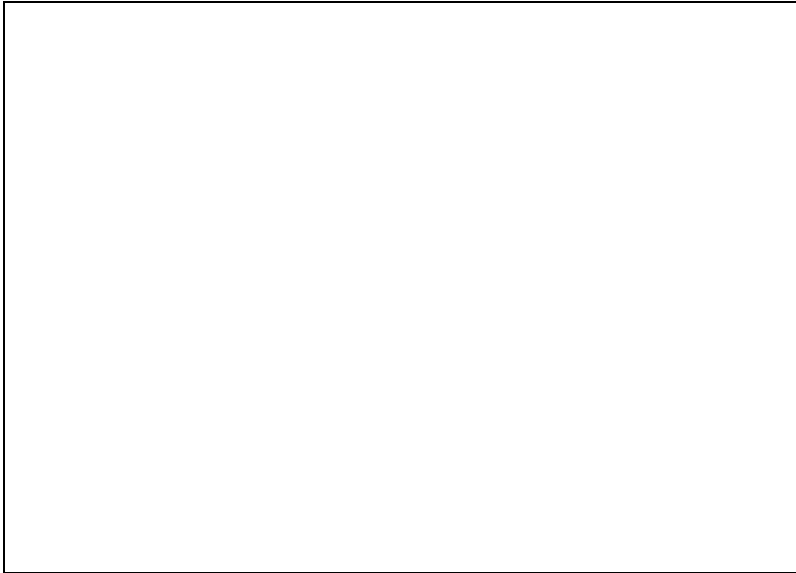

Hall said that he had just upgraded their machines where the harvested rice undergoes Hydro-Thermal Process which extract the Alpha PXP and make it 90% bio-available; i.e., the peptides are almost completely absorbed by the body’s cells.

FOOD FOR THE CELLS

Vic Brozas, a respiratory therapist by training, was amazed when after a month of taking PXP, his arthritis, hypertension and hyperacidity disappeared. Not only that, his mom’s blood pressure dropped and her arthritis and hyperacidity were cured after one month of daily PXP intake. And so were his dad’s hyperacidity and

numbness of the limbs. He joined Enzacta after these astounding effects on his family.

But what shocked Vic was the effects of PXP on dialysis patients and paralyzed people. “If you lessen dialysis from three to two times or once a week, then something must be happening to the cells of the kidneys,” says Vic. “If you feed your cells the right nutrition, they become healthy.”

FITNESS GURU

Rock climber, aerobic instructor and former host of the Fitness Barkada segment on GMA 7, Mylène Imao, 32, is the picture of physical fitness. “As an athlete, I was dehydrated,” she says, “because we athletes have to keep low body weight.”

As a result of her dehydration, her kidneys were damaged. She bled constantly. “When I ran, I would bleed and excrete solid stuff,” she says. “When I drank coffee, my sides bled,” she adds.

Mylène was hospitalized. The doctors said it was severe case of UTI or gallstones. She recovered but when she did strenuous exercises, she would bleed again.

“I started taking PXP three years ago and the symptoms disappeared,” she says. “I stopped for a month; then, half of the symptoms came back so I take it regularly up to now,” she explains.

Mylène, wife and mother, works out three times a week and keeps a busy schedule. She avers, “PXP, I can’t live without it; it’s a good addiction. I take PXP now to maintain good health and reverse the aging process.”

ANTI-AGING and BEAUTY

Hans Palacios, a businessman, is amazed at the anti-aging effects of PXP. “Before PXP, I was a very different person. I was an old man, I had a lot of body aches, I took a lot of painkillers for my back. When I started taking PXP, things changed. I got my stamina, I was able to work out better, but more importantly, the pains disappeared,” he says. “PXP changed the quality of my life. It gave back my life.”

Hans introduced beauty icon and radio/TV host Cory Quirino to PXP. He says that Ms. Quirino refers to PXP / PXP as “the very foundation of a hardcore health program”.

Ms Quirino, in turn, introduced PXP/ PXP to her good friend, actress-businesswoman Isabel Rivas. According to Hans, Ms. Rivas believes that PXP / PXP truly promotes cellular regeneration, which is proven by how beautiful and smooth it has made her skin.

BEATING CANCER

In March 2006, Amor Fajardo was diagnosed with Breast Cancer. But she couldn't undergo chemotherapy because she was pregnant. Instead, she started taking PXP.

Eight months later, during the launch of Alfa PXP Plus at the Shangri-la in November 2006, Amor proudly proclaimed to everyone there that she had just given birth to a baby girl a few days before. She had beaten Cancer. In October 2007, she had her second child.

NEW MEDICAL PARADIGM

Since the 1860s, the Germ Theory has become the bedrock of allopathic or Western conventional medicine. Diseases are caused by germs and so medicines should kill these germs or bacteria. Damaged cells should also be killed by radiation or other means.

Since the 1990s, studies on such things as antioxidants, enzymes, glyconutrients, saccharides, polypeptides, phytonutrients, etc. suggest a new medical approach. Instead of bombarding the human body with chemical medicines or radiation to kill bacteria or cancerous cells, we can feed the body's cells with functional foods or nutraceuticals in order to prevent chemical damage to cells, regenerate them and thus fortify the immune system.

In the new millennium, the new wonder drugs may not be drugs at all. They may simply be food – food for the body's cells. After all, Hippocrates himself said, “Let thy food be thy medicine.”
